SUMMARY

Early-career AI and Data Engineer with experience building LLM applications, agentic workflows, RAG systems, streaming data pipelines, analytics solutions, and full-stack applications. Hands-on experience with Python, SQL, LangGraph, FastAPI, GCP data services, PostgreSQL, MongoDB, Power BI, and modern AI tooling. Interested in building practical and reliable systems across AI engineering, data engineering, and analytics.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript

AI / GenAI: LangGraph, LangChain, RAG, LLM APIs, Prompt Engineering, LLM Evaluation, Guardrails, Agentic Workflows, Embeddings

Machine Learning / NLP: Scikit-learn, TensorFlow, XGBoost, Regression, Classification, Clustering, Feature Engineering, Model Evaluation, NLP, Transformers

Data Engineering: ETL/ELT, Apache Beam, GCP Dataflow, Pub/Sub, BigQuery, Airflow, Streaming Pipelines, Data Modelling, Data Quality, Validation, DLQ Replay

Backend / APIs: FastAPI, Pydantic, REST APIs, SQLAlchemy, JWT, OAuth 2.0, Google OAuth, Async Programming

Databases / Storage: PostgreSQL, MongoDB Atlas, BigQuery, SQLite, Redis, FAISS, Pinecone

Analytics / BI: Power BI, Pandas, NumPy, Matplotlib, Exploratory Data Analysis, KPI Reporting, Microsoft Excel

Cloud / DevOps: GCP, Azure Services, Docker, Git, GitHub Actions, Vercel, Linux/CLI

EXPERIENCE

Data Engineer Intern | Dataneurus

Oct 2025 – Mar 2026

Bengaluru, India

- Built real-time streaming data pipelines using **GCP Pub/Sub, Dataflow/Apache Beam, and BigQuery** for event ingestion, transformation, and processing.
- Developed a configuration-driven stream processing accelerator using reusable Python components, allowing new transformations and validations without modifying core pipeline code.
- Implemented data transformations including cleaning, normalization, filtering, validation, deduplication, and business-rule processing.
- Designed a **Dead Letter Queue (DLQ) replay system** with retry controls, error categorization, status tracking, and monitoring to support reliable recovery of failed events.
- Worked with data modelling, warehouse schemas, logging, retries, monitoring, Docker-based deployment, and IAM fundamentals.

AI and Data Analytics Intern | Systems Domain

Jan 2024 – Dec 2025

Bengaluru, India

- Performed data cleaning, transformation, exploratory analysis, and KPI analysis using **Python, Pandas, NumPy, SQL, and Power BI**.
- Developed Power BI dashboards and business reports for KPI tracking, metric analysis, and stakeholder communication.
- Applied regression, clustering, feature engineering, and model evaluation techniques to analytical problems.
- Built an AI tutoring chatbot using **RAG, LangChain/LangGraph, and Pinecone** over study materials.
- Built data-driven lead-generation workflows using Python, LLMs, web data extraction, enrichment APIs, and ICP-based lead scoring.
- Gained practical exposure to marketing and lead-generation analytics through business-data analysis and outreach workflows.

PROJECTS

Ekadai – Real-Time E-Commerce Data Platform

- Built and deployed a production-grade real-time e-commerce data platform integrating **Kafka, Debezium CDC, Azure Databricks, Lakeflow, Airflow, and Power BI**.

- Designed a **Bronze/Silver/Gold lakehouse** with validation, deduplication, quarantine handling, SCD2 history, reference resolution, and late-data processing.
- Built analytical fact and dimension models supporting orders, users, products, sessions, conversion funnels, revenue, and product performance.
- Implemented observability, data-quality checks, backfill/reconciliation workflows, and pipeline monitoring.

NutriBot – AI Nutrition Assistant

- Built and deployed to production an AI nutrition assistant using **FastAPI, LangGraph, Azure OpenAI, Pinecone, MongoDB Atlas, and Next.js**.
- Designed a 10-node agent workflow combining user context, deterministic nutrition calculations, RAG retrieval, food filtering, meal-plan generation, and safety checks.
- Implemented hybrid retrieval using **Pinecone and BM25** with reciprocal-rank fusion and reranking over clinical-guideline documents.
- Built automated safety and evaluation mechanisms with **421 tests** and a 19-case evaluation set, including deterministic validation and bounded regeneration.
- Reduced comparable request latency from approximately **49 seconds to 25 seconds** through model routing and context optimization.

SplitMint – AI-Powered Bill Splitting

- Built and deployed a full-stack AI-powered expense and bill-splitting application using **Next.js, TypeScript, MongoDB Atlas, Groq, and Vercel**.
- Developed natural-language expense extraction, AI explanations, financial summaries, and a conversational finance assistant.
- Implemented a balance and settlement engine to calculate net balances and generate simplified repayment paths.
- Used structured context generation to reduce unnecessary LLM token usage by approximately **35%**.

Recall – Location-Based Memory Application (In Development)

- Designing and building a location-based memory application focused on helping users remember and rediscover meaningful places and experiences.
- Working across the product lifecycle, including identifying the user problem, defining product workflows, making UX decisions, and shaping the technical architecture.
- Iterating on the product through implementation and testing while refining workflows and the overall user experience.

EDUCATION

M.Sc. Data Science CHRIST (Deemed to be University), Bengaluru	2024 – 2026
B.Sc. Computer Science, Mathematics & Statistics Kristu Jayanti College (Autonomous), Bengaluru	2020 – 2023

CERTIFICATIONS

-
- Infosys Applied Generative AI
 - AWS Cloud Foundations – AWS Academy
 - Python for Data Analytics – Pandas, NumPy, Matplotlib
 - NPTEL – Predictive Analysis: Regression Models
